PJ76324

QUAD OPERATIONAL AMPLIFIERS
In a SOP-14P and TSSOP-14P Package

GENERAL DESCRIPTION

The PJ76324 consists of four independent, high gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low-power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks and all the conventional op amp circuits.

Available Package : SOP-14P and TSSOP-14P.

FEATURES

- Wide Supply Voltage Range : 3 V to 36 V
- Low Supply Current Drain essentially Independent of Supply Voltage

(1) Stresses beyond those listed under ***absolute maximum ratings*** may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under ***recommended operating conditions*** is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values, unless otherwise noted, are with respect to the midpoint between V_{CC+} and V_{CC-}.

(3) For supply voltages less than ±22 V, the absolute maximum input voltage is equal to the supply voltage.

(4) Differential voltages are at Input+ with respect to Input–.

(5) The output may be shorted to ground or either power supply
